Data are adjusted for age, sex, number of days of illness at ED presentation, and hospitalization status. Data are reported as odds ratios (95% CI).

a - Symptoms were grouped as follows: upper respiratory = rhinorrhea and/or sore throat, lower respiratory = shortness of breath, pleuritic or non-pleuritic chest pain, wheezing and/or sputum production, GI = abdominal pain, vomiting, diarrhea and/or anorexia, neurologic = headache and/or seizures, MSK= joint and/or muscle pain, dehydration = decreased urine output and/or refusal to drink, systemic = irritability, lethargy, apnea and/or drowsiness, rash/oral changes = rash to skin, hands, feet and/or oral or extremity changes.
